Where Experience Shines[®]

WESTSTARAVIATION.COM

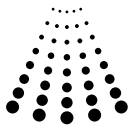

West Star Aviation takes pride in our team's expertise on the specific airframes you fly. Similarly, our teams have developed experience and skill in what we call "Special Services". These are services that, when combined with our core competencies like maintenance, paint, interior, avionics or parts, elevate the level of quality and service to what West Star Aviation customers have come to expect.

Sometimes overlooked, these services are still a critical part of the capabilities mix and expertise that makes West Star Aviation a world-class aviation services provider.

Bright Work

West Star Aviation can provide full bright work on your aircraft to remove oxidation and scratches returning them to like new appearance. Our teams have extensive training and continually work to refine our own process. This attention to detail results in a superb finish every time – no swirls, only an amazing shine.

Coatings

Titanium Paint Protection

Top Flight Supplies' Titanium (TFS Titanium) is a reactive polymer protection that once applied to any paint or composite painted surface will create the highest quality and longest lasting protective coating on the market. It also gives the painted surface a deep gloss that is extremely shiny and smooth to the touch.

TFS Titanium is a Nano coating that bonds to the painted surfaces, leaving a flat level surface to reflect UV rays and contaminants from penetrating the protection. This is unlike the traditional waxes which are a topical application and will be removed after a dozen washes.

One application can last up to 12 months or longer, if maintained properly.

- Reduces parasitic drag
- Long- lasting UV protection
- Deep rich gloss finish
- Reduces maintenance time & cost
- Protects from fading & oxidation
- Protect your investment - Increase your resale value

Platinum Ceramic Coating

Top Flight Supplies Platinum Ceramic Coating is a system made by professional aircraft detailers with over 20 years of experience.

This ceramic coating is not the traditional topical applications like the old waxes. TFS Platinum is a nano coating that provides unrivaled protection. It works on a molecular level to seal the surface to repel water and contaminants while maintaining a deep clear, hard as nail finish. Platinum Ceramic Coating will provide for ease of cleanings, prolong the life of the paint, less frequent polishes and requires no additional paint protection.

TFS is aviation specific, meaning throughout product development we were determined to handcraft a ceramic coating for airplanes and helicopters only.

- One application can last up to 2 years or longer, if maintained properly.
- 9H ultra hard protection
- Deep rich gloss finish
- Protects against corrosion, acid rain, solvents, chemicals, exhaust fumes & UV rays
- Extremely hydrophobic
- Highly durable and can only be removed by abrasion

Maintenance Paint Services

Our trained and experienced teams can provide a variety of paintwork for your aircraft when it is down for maintenance. State of the art paint color matching capabilities allow our teams to perform spot repairs, general touch ups and more while your aircraft is in the maintenance hangar – all without extending downtime!

Carpet Extraction

Our state-of-the-art carpet extraction process uses water to remove dirt, oil and the moisture introduced during cleaning. We can extract carpet both inside aircraft or while it is removed.

Window Repair Services

We have a full-time windows tech at various full-service locations that can remove scratches and chips on your windows as long as they meet certain inspection criteria. West Star's window experts can also remove and apply any required rain repellent that is required for your aircraft's windows. We also offer a cosmetic window polishing which looks great when completed after a fresh paint job or coating application.

Exterior and Interior Detailing

We offer complete detail services for your aircraft both inside and out to keep your aircraft looking like new. We offer a wide variety of cleaning options from exterior wipe down, steam cleaning, carpet extraction, cockpit cleaning, leather and upholstery cleaning and conditioning.

Disinfection

We can disinfect your aircraft interior as well. We use the innovative Curis Decontamination system that can fully disinfect your aircraft in just 4 hours. This system utilizes a CURoxide fogging solution that leaves no residues behind on interior surfaces. The CURIS system and CURoxide are on the EPA's List N for efficacy in killing SARS-Cov-2 on hard, non-porous surfaces

Not all services are available at all locations. Please call to confirm your location's capabilities.

Full-service MRO Locations:
